

Four Pillars of Health Research:

1. Biomedical research: investigating mechanisms of health/disease at cellular, body system, or whole-body level
2. Clinical research: on/for patients, includes diagnosis and intervention
3. Health services and policy research: investigating health services in themselves, how they are delivered, quality/cost, and how they are received
4. Social cultural, environmental, and population health research: investigating populations and broader health determinants

Health Concerns for University Students:

- Mental health
- Exercise
- Sleep (hormonal effect of sleep, sleep deprivation, etc)
- Housing
- Access to primary care
- Substance use
- Nutrition
